

natural swimming pool

Villa CP

Girona, Spain

Architect: ZEST Architecture
Year of completion: 2013
Gross floor area: 440 m²
Materials used: natural stone, corten steel, wood

The restoration of an old Catalan farmhouse by Zest Architecture has resulted in a spectacular and exemplary model of contemporary Mediterranean design. The existing stone walls were largely rebuilt, with fabulous vast openings towards the landscape linking the house to its magnificent surroundings. Ingenious features such as

ensure that the dwelling is sustainable and eco-friendly. In a bold move, the old has been left visible with all its scars, while new materials such as corten steel, wood and clay were chosen for the beauty of their natural imperfections. Rain, wind and human touch will make sure that the house will be even more beautiful over time.
